Vecoplan to present efficient wood shredding and chipping solutions at Woodworking trade fair:

From component to overall process

From 29 to 29 October, visitors to the Woodworking trade fair in Minsk will have a chance to see efficient wood processing by machinery and equipment from Vecoplan. One of the company's presentations will focus on its optimised biomass chipper.

Woodworking is the largest and most authoritative international exhibition of machinery, equipment and technologies for the woodworking and furniture industries in Belarus. Exhibitors will be showing the full spectrum of logging and woodworking equipment. The distinguishing feature of the exhibition is the huge amount of operating equipment. Examples are the new VTH 450-850 and VTH 450-1050 biomass chippers from Vecoplan. These robust, reliable and powerful machines have short, horizontal feeding units to produce large throughput quantities of energy chips for thermal use in biomass power plants. The new chippers are also ideal for sawmills, where they can be used to efficiently chop waste wood that is free of impurities. Vecoplan's experts will also report on the VHZ series. These compact single-shaft shredders are particularly suitable for wood processing operations.

As a solution provider for wood processing, Vecoplan will not only be informing visitors in Minsk about individual components in the processing of residual wood, it will also present overall concepts, including installation and service. Visitors can learn all about the company's expertise and broad product portfolio at the Vecoplan exhibition booth.

Vecoplan at Woodworking: Booth C4
